## Introduction

WiFiBO is a universal A/C remote control with additional WiFi functionality and can control over 99% of A/C's in the world including all major brands. Downloading the WiFiBO APP to a mobile device will enable you to control your A/C from anywhere. The 180 rotating IR transmitter guarantees that the A/C will receive the signal perfectly no matter where the remote is positioned in the room. For added convenience there is a built in LED light that can be used as a torch and the backlit LCD screen makes operation easy day and night. The built in rechargeable battery provides long and reliable service life.

**180 rotating IR transmitter. Controls the AC from anywhere in the room.**

### Smart Phone APP setting steps for the remote control

- Scan QR code to download WiFiBO APP
- Power on and start configuring
- Enter WiFi password, configured successfully

### Attention

1. When using WiFi function please ensure the remote control is connected to a power supply.
2. Without WiFi or if not connected to power, the remote control can only be used as a normal remote control.
3. If the remote control not used for an extended period, please disconnect from power and then turn off the remote using the switch on the side of the remote control.
4. It is normal that the remote control may occasionally generate slight heat when charging.
